

POS Currency Exchange

POS Currency Exchange Version 20.0.1.0.1 English

A currency exchange counter inside the Odoo 20 Point of Sale: the customer brings notes in one currency and leaves with notes in another, minus a commission. Built on POS Multi-Currency Cash, which controls the drawer of every currency, its cash rates and its coins and notes.

Overview

Shops in tourist areas, hotels, campsites or border towns are regularly asked to change money. With POS Multi-Currency Cash the register already accepts foreign notes and hands change back in a foreign currency; this module adds the operation without a sale:

- the cashier opens the **Currency Exchange** entry of the register menu, picks the currency received and the currency handed back, and types the amount received;
- the register quotes the amount to hand back at the cash rates of the point of sale, with the commission of the currency and the rounding to its coins and notes;
- the operation is recorded with the cashier and, when required, the customer, and an exchange receipt is printed;
- both drawers move: the notes received enter the drawer of their currency and the notes handed back leave the other one, on the cash journal of the session, with the commission posted on a dedicated income account;
- the operations appear in the closing control, in the *Currency Position* report and in the *Sales Details* report, and are listed per point of sale, session and cashier with a pivot of the commissions.

Requirements

- The **Point of Sale** application (`point_of_sale`), Odoo 20.
- **POS Multi-Currency Cash** (`pos_nm_multicurrencies`) 20.0, with at least one foreign currency on the cash payment method of the point of sale (see its guide: *Accept a currency in cash*).
- An **income account for the commissions**.

Configuration

Enable the counter

Go to *Point of Sale -> Configuration -> Settings*, select your point of sale and look at the **Currency Exchange** section:

- **Currency Exchange** (enabled by default): shows the entry in the menu of the register.
- **Commission account**: income account receiving the commissions. It is required to record an operation.
- **Customer required above**: value of an operation, in the currency of the point of sale, above which the customer must be identified. 0: never.

Commissions per currency

Go to *Point of Sale -> Configuration -> Cash Currencies* and open the line of the currency. The *Currency Exchange* group holds three values, all in the currency of the point of sale except the percentage:

- **Exchange Commission (%)**: percentage of the value of the notes received;
- **Fixed Exchange Commission**: fixed part added to the percentage;
- **Minimum Exchange Commission**: the commission is at least this amount.

The commission of an operation is the one of the foreign currency involved (the currency handed back when both are foreign). Every change of the commissions is logged in the chatter of the line, like the rates.

Rates and coins and notes

The counter uses the cash rates of POS Multi-Currency Cash: the notes received are valued at the rate applied to what a customer pays (rate of Odoo with the margin, or the fixed rate), the notes handed back at the rate applied to the change (the fixed change rate when set). The notes handed back are rounded *down* to the **Change Rounding** of their currency, so that the cashier never has to hand back coins that do not exist in the drawer; the remainder stays in the commission.

Daily Workflow

Exchanging currencies

From any screen of the register, open the menu (top right) and press **Currency Exchange**:

1. pick the currency **received from the customer** and type the amount;
2. pick the currency **handed back**; the amount, the rate applied (commission included) and the commission are quoted as you type. The arrow button swaps the two currencies;
3. when the value of the notes received exceeds the threshold of the point of sale, press **Customer** and pick the customer (create it if needed); the button turns red until it is done;

4. add a note if useful, then **Confirm**. The cash drawer opens, the exchange receipt is printed (received, handed back, rate, commission) and a notification sums the operation up.

The register refuses an operation when the drawer of the currency handed back does not hold enough notes, when the amount is too small for a single note, or when the same currency is picked on both sides.

Closing the session

The closing popup shows a **Currency Exchange** block with the number of operations, every operation (received, handed back, cashier) and the total of the commissions. The notes received and handed back are already in the expected amounts of their currencies: an exchange is a cash in on one drawer and a cash out on the other, both listed in the moves of the currency.

Reviewing the operations

Point of Sale -> Orders -> Currency Exchanges lists every operation with its reference, date, point of sale, session, cashier, customer, the notes received and handed back, the rate and the commission; group by point of sale, session, cashier or currency, and switch to the pivot for the commissions per day and currency. The session form has an **Exchanges** button with the total of the commissions.

The *Sales Details* report of a session ends with a *Currency Exchange* table (operations and commissions), and the *Currency Position* report of POS Multi-Currency Cash reflects the notes moved.

Accounting Notes

- An operation is two statement lines of the cash journal of the session: the notes received (positive, in their currency, valued at the cash rate) and the notes handed back (negative, in their currency, valued at the change rate). A line in the currency of the point of sale carries no foreign currency.
- Both lines use the **commission account** as counterpart: the difference between the two values, the commission, is what remains on that account. No separate entry is posted for the commission.
- The margin between the cash rates and the rates of Odoo is realized like for any sale in a foreign currency: when the notes are deposited or the drawer is revalued (see the guide of POS Multi-Currency Cash).
- The operations can be opened from their form (*Statement Lines* button) and cannot be edited; a mistaken operation is corrected with an opposite operation or a cash move.

Known Limitations

- The counter works online: the quote and the recording are server calls.
- One operation involves two currencies; a customer changing several currencies at once makes several operations.
- The receipt is printed through the receipt printer of the register or the browser; there is no email of the exchange receipt.

Troubleshooting

The Currency Exchange entry is missing from the menu

Check that **Currency Exchange** is enabled on the point of sale, then close and reopen the register: the setting is read when it loads its data.

The operation is refused for the commission account

Set the **Commission account** in the *Currency Exchange* section of the settings of the point of sale.

The amount handed back is lower than expected

The notes handed back are rounded down to the **Change Rounding** of their currency, and the commission includes the remainder. Lower the rounding on the currency, or check its commission.
